

ema_trend_hold - Strategy Walkthrough

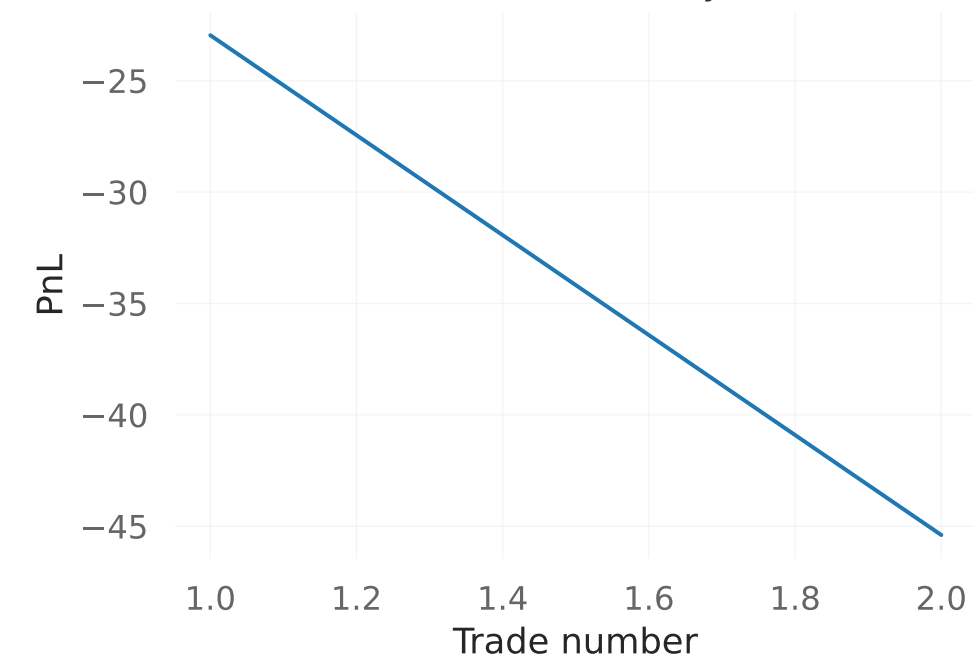

Strategy name ema_trend_hold Files reviewed - src/strategies/ema_trend_hold/strategy.py - src/strategies/ema_trend_hold/backtest_ema_trend_hold_v2.py Step-by-step execution flow 1) B loads OHLCV and computes ema_trend from close using trend_ema period. 2) BacktesterV2 is initialized with fee/slippage, direction, stop settings, pyramiding, and sizing. 3) Loop starts at trend_ema + bt.on_bar is called first each bar. 5) Strategy check_signal compares current close with current ema_trend. 6) Signal is executed with bt.on_signal at current close. 7) Results are exported as equity curve image, optional report, and trades CSV. Parameters and defaults - Strategy-specific trend_ema (required). - Execution and cost: initial_balance=1000.0, commission_pct=0.001, slippage_pct=0.001. - Position controls: position_mode="all_in", trade_size=100.0, position_pyramiding=1. - Direction and risk: allow_short=False, stop_loss_pct=0.02, take_profit_pct=None. - Flags: generate_report=True, generate_plots=True, generate_equity=True. Indicators/calculations ema_trend = EMA(close, trend_ema) via pandas ewm. Entry conditions - LONG when price > ema_trend. Exit conditions - EXIT long when current_side is LONG and price < ema_trend. Risk and position management (SL/TP/ATR/trailing/pyramiding/position sizing) - Uses percent stop_loss_pct and optional take_profit_pct through BacktesterV2. - No ATR stop, no trailing stop in strategy code. - Pyramiding supported by BacktesterV2 (default 1). - Position sizing controlled by BacktesterV2 mode and optional position_size. Outputs (trades, stats, plots, reports) - clean_stats from bt.stats(). - Equity curve PNG under static/backtests/ema_trend_hold/<run_id>/. - Trades CSV with metadata. - QuantStats report when generate_report=True. Known ambiguities or inconsistencies in the code - No explicit empty-data check before writing df["ema_trend"] and entering the loop. - The logic can emit repeated LONG signals on every bar if price > ema_trend; duplicate-entry handling is left to BacktesterV2 and pyramiding rules.

ema_trend_hold - Trade summary

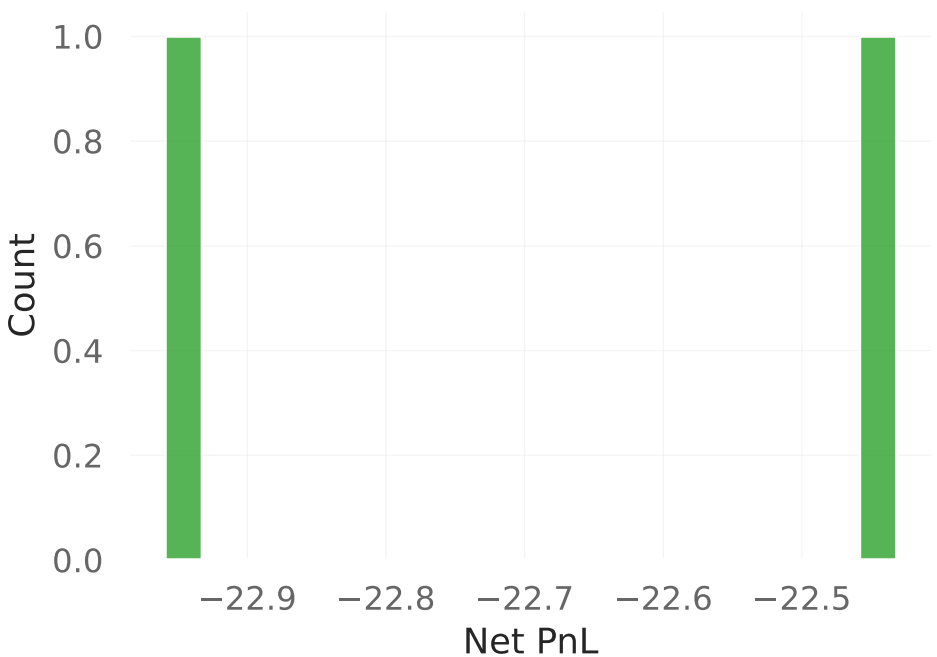

Trades: 2 Total Net PnL: -45.39 Average Net PnL per trade: -22.70 Win rate: 0.00% First trigger above EMA200 Last trigger: stop_loss Source CSV:
